INDICATIONS

Type 2 Diabetes

Mellitus Blood Glucose

Fluctuation DPP-4 inhibitors

Diabetic Ketoacidosis

✔ **Sitagliptin** : Sitagliptin is in a class of medications called dipeptidyl peptidase-4 (DPP-4) inhibitors. It works by increasing the amounts of certain natural substances that lower blood sugar when it is high.

✔ **Metformin** : Metformin is used together with diet and exercise to improve blood sugar control in adults with type 2 diabetes mellitus.

In patients with inadequate glycemic control
